#### **DETAILED ACTION**

##### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 06 November 2009 has been entered.

##### ***Information Disclosure Statement***

The information disclosure statement (IDS) submitted on 06 November 2009 was filed after payment of the issue fee. However, the petition filed under the provisions of 37 CFR 1.313(c)(2) has been granted and the application has been withdrawn from issue under 37 CFR 1.313(c)(1). The request for continued examination (RCE) under 37 CFR 1.114 filed 25 November 2009 has been entered, and thus the information disclosure statement submitted 06 November 2009 has been considered by the examiner.

##### ***Allowable Subject Matter***

Claims 81-100 are allowed. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. WO 00/07506 to Anson et al. is the prior art Figures 1 and 2 shown in U.S. Publication No. 2003/0033006 A1 to Phillips et al. cited on the applicant's IDS submitted 06 November 2009. As can be clearly seen in

Figure 1 of Anson, Anson fails to disclose the first ends of the legs of the fixator, or staple, project in a direction generally away from the second ends of the legs while residing in the delivery tube and after being driven into tissue so that the structure penetrates tissue so as to not form a spiral configuration. Phillips fails to disclose two arc segments as recited in the claims (for example, see Figures 2-7). Furthermore, since Phillips and Anson fail to suggest the legs are shaped as recited in the claims, there's nothing to suggest the fixators or staples are adapted to perform as recited, and thus there's nothing to suggest the fixators or staples do not form a spiral configuration after being driven through the delivery device and into tissue to substantially prevent migration of the clip. As such, the applicant's invention is allowable over Phillips and Anson. Jacob et al. (U.S. Patent No. 5,893,856) and Allen et al. (U.S. Patent No. 6,113,611) disclose clips, but fail to disclose the particular arc structure as recited in the claims.
